EDUCATION

VNR Vignana Jyothi Institute of Engineering and Technology (VNR VJIET) — Hyderabad

B.Tech in Computer Science and Engineering (Expected 2029)

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (Java), Operating Systems, Database Management Systems.
- Indian Institute of Technology Madras (IITM) — Remote / Online
BS Degree Program in Data Science & Applications (Ongoing)
- Focus: Computational Thinking, Python Programming, Applied Statistics.

TECHNICAL SKILLS

- **Languages:** Python, C, Java, JavaScript, SQL
- **Web & Frameworks:** React.js, Node.js, Express.js, Tailwind CSS, Flask, HTML5/CSS3
- **Databases & Tools:** MongoDB Atlas, JDBC / MySQL, Git & GitHub, Postman, Vite
- **Core Domains:** Full-Stack Development, Data Structures & Algorithms, OS Process Scheduling, IoT & Edge AI

PROJECTS

MedVault Core — Full-Stack Patient Health Record Platform

Tech: React, Vite, Node.js, Express, Tailwind CSS, WebSockets, MongoDB

- Architected a secure, patient-held health record system with real-time consent verification via WebSockets.
- Implemented clean RESTful API endpoints for user authentication, record storage, and dynamic doctor access logs.
- Built a responsive UI using React and Tailwind CSS, focusing on minimal latency and clear status feedback.

CPU Process Scheduling Simulator

Tech: C, Python, Flask, HTML5 Canvas / Charting

- Engineered core process scheduling algorithms in C, including FCFS, SJF, SRTF, Round Robin, and Priority Scheduling.
- Integrated the C core with a Python Flask server to process dynamic execution timelines and metrics.
- Visualized execution runs with interactive Gantt charts and real-time ready-queue state inspections.

Repo Guardian — On-Device Code Review System (iQOO Hackathon)

Tech: Python, llama.cpp, GGUF Models, Shell Scripting

- Built an edge-deployable AI code review assistant leveraging quantized local LLMs for private, offline code analysis.
- Designed automated static prompt-injection pipelines to detect bugs, code smells, and security anti-patterns locally.

Vehicle Rental Management System

Tech: Java, OOP Principles, JDBC, MySQL

- Developed a modular desktop backend implementing OOP patterns (inheritance, polymorphism, encapsulation, custom exception handling).
- Integrated direct JDBC database connections for transactional vehicle bookings, billing calculations, and fleet tracking.

CODING PROFILES & ACHIEVEMENTS

- **Competitive Programming:** Active on LeetCode and Codeforces, consistently solving problems around dynamic programming, graph traversal, and arrays.
- **Hackathons:** Competed in the IQOO Hackathon City Battle with Team Vortex3, developing edge AI developer tools.
- **Academic Projects:** Built an automated IoT smart irrigation prototype using ESP32, capacitive moisture probes, and fail-safe flow logic.
